

Sales and Profit Analysis Report

Dataset: Superstore. csv

Tools Used: Excel, Tableau

Author: Tsentylo Valeriia

1. Project Overview

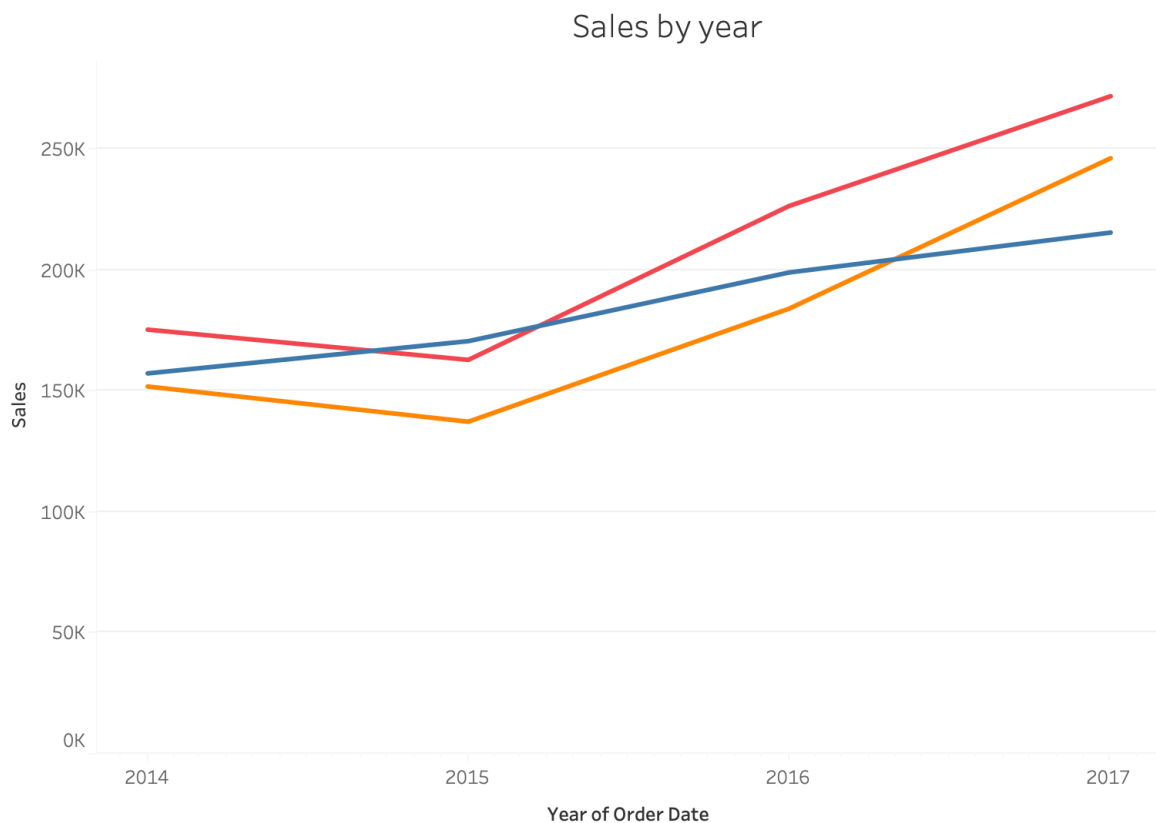

The goal of this project was to analyze sales and profit data to identify profitable and unprofitable product categories, analyze sales trends over time, and determine the impact of discounts on profit.

2. Sales Analysis

Sales were analyzed by category, subcategory, and over time.

Key findings:

- Sales increased from \$484K in 2014 to \$733K in 2017 (+51%).
- The Technology category generated the highest sales.
- Furniture also showed relatively high sales but did not generate high profit.

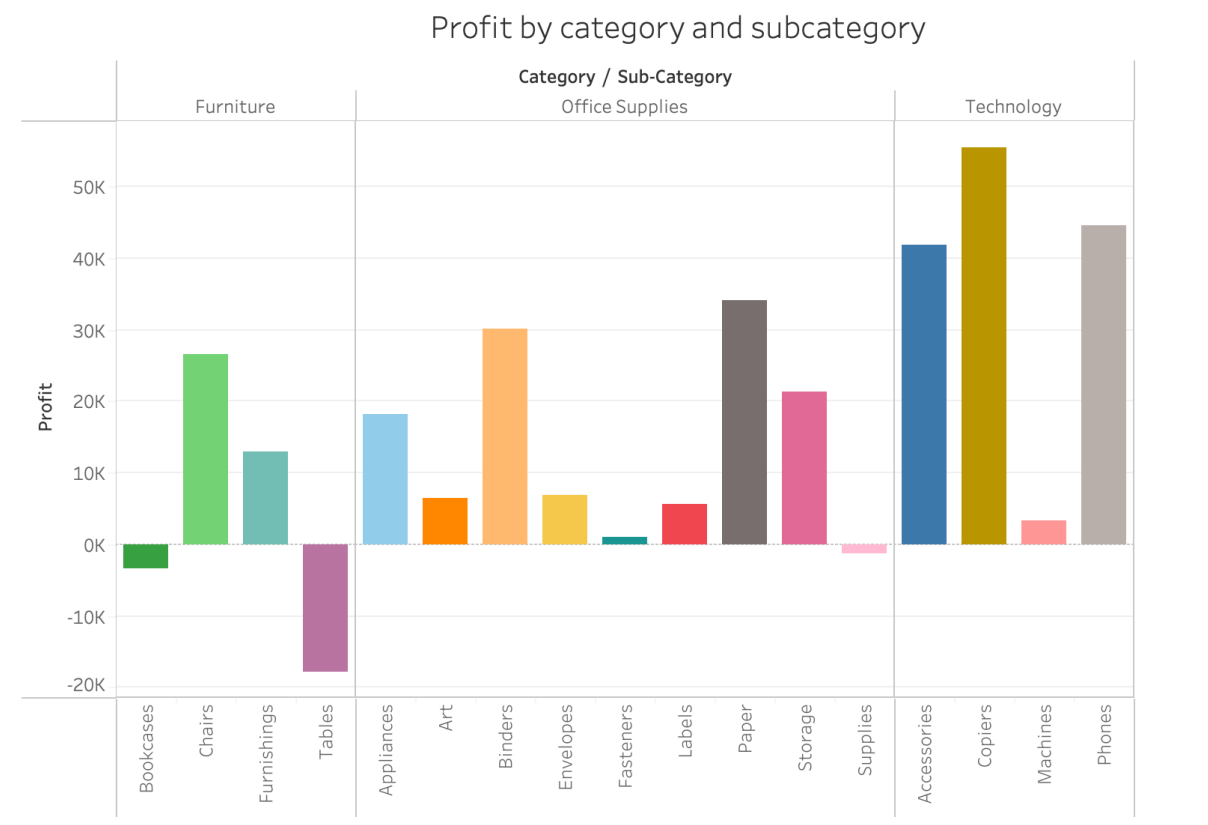

3. Profit Analysis

Profit was analyzed by category and subcategory.

Key findings:

- Technology is the most profitable category.
- Office Supplies show stable and consistent profit.
- Furniture is the least profitable category.

Further analysis showed that some subcategories in Furniture are unprofitable.

Loss-making subcategories:

- Tables
- Bookcases

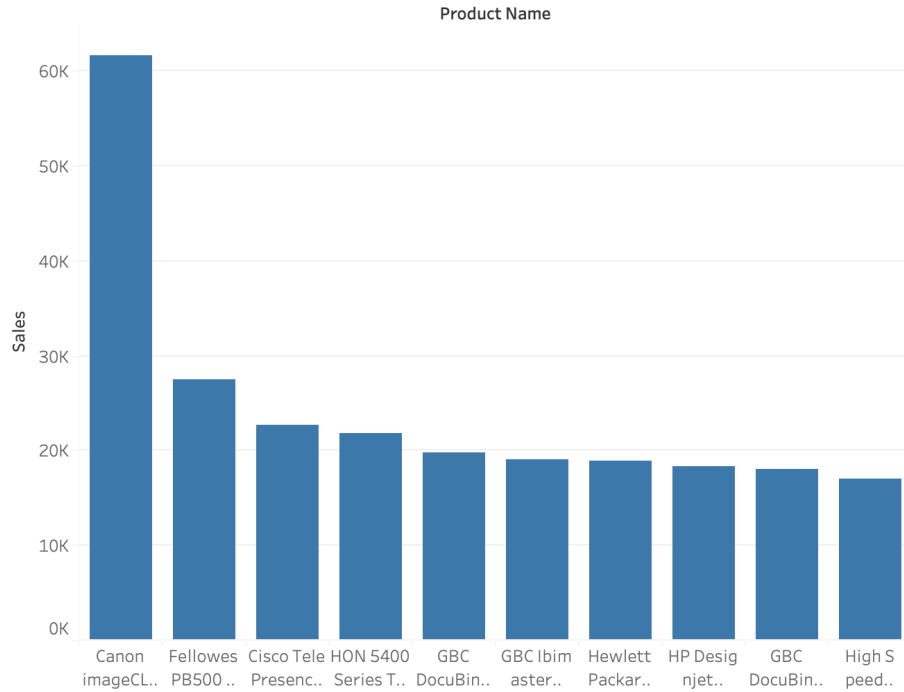

4. Top Products Analysis

Top products by sales and profit were analyzed.

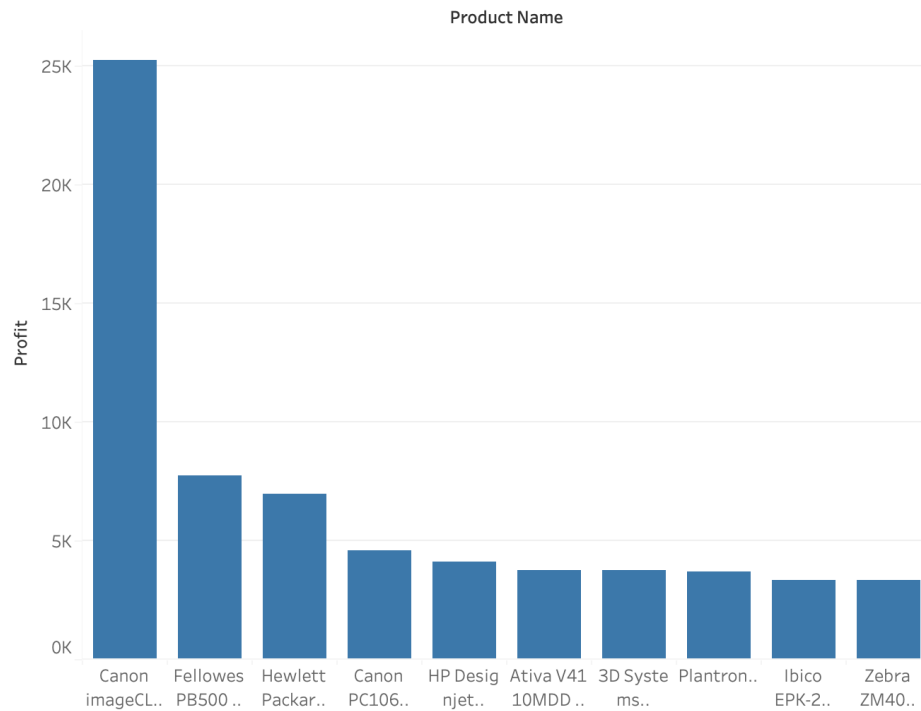

Key findings:

- The Canon imageCLASS printer is the top-selling product.
- Top-selling products are not always the most profitable.
- Some products generate high sales but low profit.

Top 10 Products by sales

Top 10 products by profit

5. Discount Impact Analysis

The relationship between discount and profit was analyzed, especially for the Furniture category.

Key findings:

- Higher discounts are associated with lower profit.
- When the discount exceeds approximately 20%, profit becomes negative.
- Tables and Bookcases have the highest discounts and generate losses.

6. Conclusion

The analysis showed that the main issue in the Furniture category is not low sales, but high discounts on Tables and Bookcases, which lead to negative profit.

Overall, the business is growing, but profitability can be improved by adjusting the discount strategy.

7. Recommendations

Based on the analysis, the following recommendations are suggested:

- Reduce discounts on Tables and Bookcases.
- Review pricing strategy for low-margin products.
- Focus on promoting high-profit products from the Technology category.
- Apply discounts more carefully and avoid high discounts on low-margin products.
- Analyze costs and shipping expenses for Furniture products.
